

Track Scales

Description:

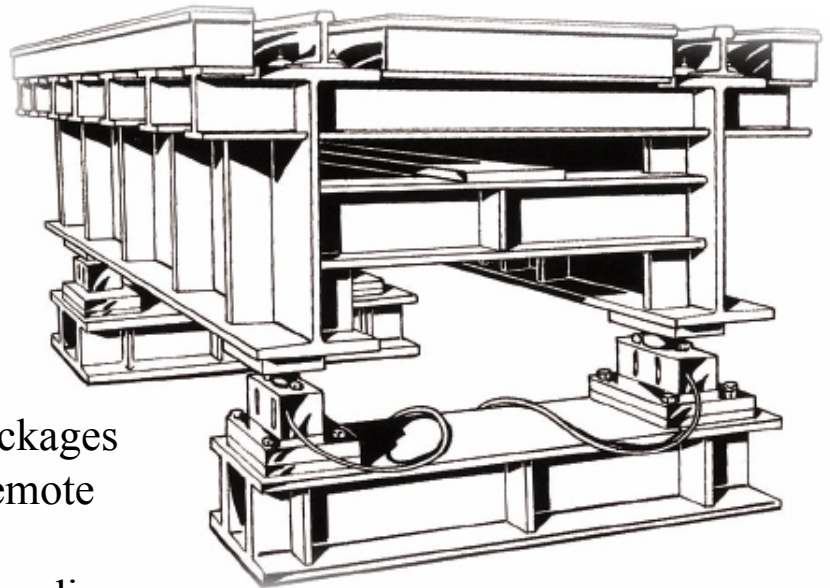

The track scale is designed to weigh rail cars, scrap transfer cars, hot metal transfer cars and torpedo cars. The scale can be manufactured to fit into an existing pit. The scale utilizes double-ended shear beam load cells with self-aligning bearing assemblies. The load cells and bearing assemblies can also be designed to upgrade an existing scale.

Specifications:

- Floating load cell bearing assemblies
- Double-ended shear beam load cells
- Digital weight instrument

Options:

- Custom instrumentation with packages
- R.F radio data transmission to remote locations
- Remote calibration through R.F. radios
- Scoreboards, printers, computer interfaces
- Touch screen digital control system
- Custom batching programs
- In-motion weighing
- Shallow pit design
